## **DataPath Successfully Completes SAS 70 Type II Audit**

**October 2, 2007** – DataPath, Inc., an industry innovator in the Consumer Driven Healthcare software development market, has completed a Statement on Auditing Standards 70 (SAS 70) Type II Audit.

The SAS 70 is an internationally recognized auditing standard developed by the American Institute of Certified Public Accountants (AICPA). The successful completion of the SAS 70 audit represents that DataPath has completed an in-depth audit of their control activities, including controls over information technology and related processes, over a set period of time. Service organizations or service providers must demonstrate they have adequate controls and safeguards when they host or process data belonging to their customers.

DataPath, Inc.'s completion of a SAS 70 Type II Audit is indicative of the overall effectiveness of the company's controls in place over the duration of the test. The Securities and Exchange Commission recognize this audit as an acceptable method whereby the management of a company outsourcing processes to a third-party service provider (e.g. DataPath) is assured of the integrity of the service organization's internal controls, avoiding the need for a separate audit of the company doing the outsourcing.

DataPath, Inc.'s SAS 70 certification means that groups using DataPath products and/or benefit administration services are assured their administration processes have requisite internal controls in place when seeking their own SAS 70 certification.

"Being SAS 70 compliant has become very important in the rapidly growing Health Care Administration market," says John Robbins, Sr, CEO of DataPath. "The ability to ensure the security of personal information and electronically stored records is critical to the peace of mind of the consumer. In light of things like HIPAA compliance and the protection of Personal Health Information, knowing that the systems and processes you use are secure: that's huge. That's a value add."

DataPath is proud to be one of the few organizations in our industry to provide this level of high-quality, secure business process to our clients and to our client's customers which is absolutely necessary in the environment of heightened compliance impacting all facets of the healthcare administration industry.

### **About DataPath**

DataPath, Inc. is a privately owned software company, pioneering the Consumer Driven Health Care model and delivering healthcare administration solutions to the public since 1984. The developer of the DPI Suite, DataPath is the creator of the most dynamic and flexible single-vendor solution on the market, offering full integration of HSA, HRA, FSA, MERP, credit and debit cards.
